(54) Title: A MOBILE TELEPHONE AND A METHOD OF OPERATING THE MOBILE TELEPHONE

(57) Abstract: A mobile telephone having two cards, where it is desired to maintain a first card in its operative position and maintain a predetermined activity or functionality when removing or replacing the second card. If the first card is to be removed, however, the predetermined activity of functionality is inactivated. The second card may be tilted out of its operative position, and the first card may have its path of removal blocked by a battery feeding power to at least the predetermined activity or functionality, which preferably uses data provided on the first card during operation.
